HOW WATER WORKS

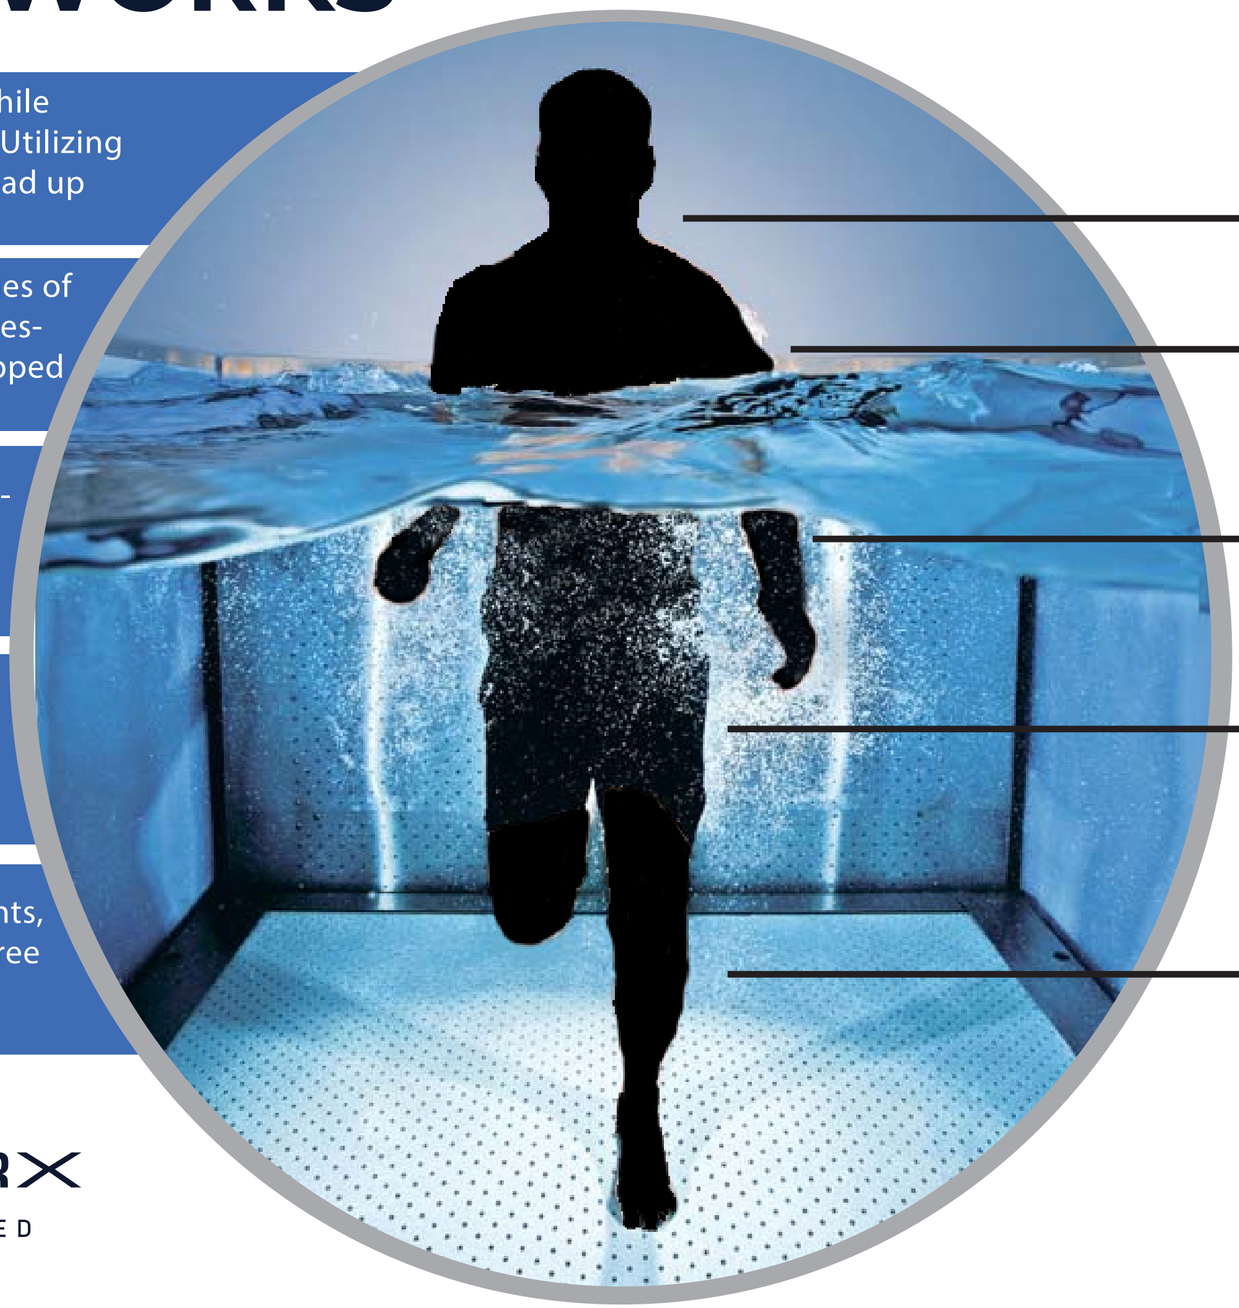

BUOYANCY: Water provides assistive support while encouraging upright posture with greater ease. Utilizing various water depths allows participates to offload up to 90% of their weight.

HYDROSTATIC PRESSURE: The natural properties of water reduce swelling and inflammation. This pressure is similar to 14 compression bandages wrapped around the body at the level of submersion.

RESISTANCE: Using the resistance jet or exercising through water creates added resistance to boost strength, endurance and flexibility.

SENSORY STIMULATION: Water assists in increasing body awareness, improving coordination, and promoting relaxation.

WATER TEMPERATURE: Warm water relaxes joints, increases range of motion and provides a pain-free environment for treatments or wellness.
